GSM7 Medical 7 Watt Single Output Global Performance Switchers

SPECIFICATIONS:

Ac Input

85-264 Vac, 47-63 Hz single phase.

HoldupTime

20 ms minimum from loss of ac.

Output Power

Normal continuous output power is 7 W, 9 W peak for 60 s maximum duration, 10% duty cycle. Factory set to begin power limiting at approximately 9 W.

Output Regulation

Regulation from initial setpoint measured by changing load from no-load to 50% load or 50% load to full load in either direction. Initial sepoint tolerance is measured at 50% load. No minimum load is required to maintain proper regulation.

Overload Protection

Fully protected against short circuit and output overload. Short circuit protection is cycling type power limit.

No Load Turn-on/Standby

Full regulation at no load.

Output Noise

0.5% rms, 1% pk-pk, 20 MHz bandwidth, differential mode. Measured with scope probe directly across output terminals of the power supply with load terminated with 0.1 uF capacitor.

Voltage Adjustment

Factory set with fixed resistors to maximize reliability.

Efficiency

72% minimum for the 5.0 V model at full rated load, nominal input voltage. Efficiency increases as output voltage increases.

Input Protection

Internal ac fuse provided on all units. Designed to open only if catastrophic failure occurs in the unit; fuse does not blow on overload or short circuit. Internal 320 Vac MOV included. Units will not be damaged when tested for input transients in accordance with the following standards:

ESD—IEC1000-4-2 Level III Fast Transient—IEC1000-4-4 Level III
