Introduction

The BLC Series Basic Low Pressure Compact Sensor is based on All Sensors' CoBeam²™ Technology. The device provides a high output signal at a low operating voltage and reduces the overall supply voltage while maintaining comparable output levels to traditional equivalent basic sensing elements. This lower supply voltage gives rise to improved warm-up shift while the CoBeam² Technology itself reduces package stress susceptibility resulting in improved overall long term stability. The technology also vastly improves position sensitivity compared to conventional single die devices.

This series is intended for use with non-corrosive, non-ionic working fluids such as air, dry gases and the like. The output is also ratiometric to the supply voltage and is operable from 0.9 to 1.8 volts DC.

All Sensors Corporation's Quality Management System has been certified by TUV SUD in accordance with the ISO 9001:2015 Standard.

BLC SERIES BASIC COMPACT PRESSURE SENSORS

Features	Applications
• Pressure Ranges from 0 to 30 inH₂O, 5 PSI to 150 PSI, and 5 PSIA to 150 PSIA • μPower Low Supply Voltage (0.9V to 1.8V) • 0.1% Linearity Typical • Improved Front to Back Linearity • Less Position Sensitivity • Improved Warm-Up Shift Distribution	• Medical Breathing • Environmental Controls • HVAC • Portable / Hand-Held Devices

Specification Notes

NOTE 1: SHIFT IS RELATIVE TO 25°C.

NOTE 2: SHIFT IS WITHIN THE FIRST HOUR OF EXCITATION APPLIED TO THE DEVICE.

NOTE 3: MEASURED AT ONE-HALF FULL SCALE RATED PRESSURE USING BEST STRAIGHT LINE CURVE FIT.

NOTE 4: THE SPAN IS THE ALGEBRAIC DIFFERENCE BETWEEN FULL SCALE OUTPUT VOLTAGE AND THE OFFSET VOLTAGE.

NOTE 5: FRONT-BACK LINEARITY COMPUTED AS:
$$\text{Lin FB} = \left(\left| \frac{\text{Span}_{\text{PortB}}}{\text{Span}_{\text{PortA}}} - 1 \right| \right) \cdot 100\%$$

NOTE 6: TYPICAL WARM UP OF CHARACTERISTICS AS SHOWN IN GRAPH.

Soldering Recommendations

- 1) Solder parts as a second operation only.
- 2) For D4, LD2, and LD4 package post reflow, wait for 72 hrs before performing any calibration operations.
- 3) For all other packages post reflow, wait for 36 hrs before performing any calibration operations.
- 4) Perform spot cleaning as necessary only by hand. **DO NOT** wash or submerge device in cleaning liquid.
- 5) Max 270°C lead temperature (soldering 2-4 sec.)

If these devices are to be subjected to solder reflow assembly or other high temperature processing, they must be baked for 1 hour at 125°C within 24 hours prior to exposure. Failure to comply may result in cracking and/or delamination of critical interfaces within the package, and is not covered by warranty.

How to Order

Refer to Table 2 for standard part numbers offered which includes the pressure range and package.

Example P/N with options: BLC-L10D-D4-P

Where:

Pressure Range (D4 Package – Differential Only): L01D, L05D, L10D, L20D, L30D, 005D, 015D, 030D, 100D, 150D

Pressure Range (LD2, and LD4 Packages – Differential Only): L01D, L05D, L10D, L20D, L30D

Pressure Range (U1, U2 Packages – Gage Only): L01D, L05D, L10D, L20D, L30D, 005D, 015D, 030D, 100D, 150D

Pressure Range (U4 Package – Absolute Only): 015A, 030A, 100A, 150A

Example Part Numbers:

BLC-L10D-D4-P has a Parylene coating

BLC-L10D-D4 does not have a Parylene coating

Parylene Coating:

Parylene coating provides a moisture barrier and protection from some harsh media. Unlike other pressure sensor suppliers offering a Parylene coating, All Sensors performs this process in-house and uses an advanced production system to achieve the highest accuracy and reliability. This avoids transferring products out of and back to the pressure sensor manufacturing facility, provides complete quality control and improves the delivery time to customers. Specially designed masking techniques allow All Sensors to apply a cost-effective, high-volume Parylene coating in-house.

Consult factory for applicability of Parylene for the target application and sensor type.

This option is only available for pressure ranges of ± 10 inH₂O and above and is not available for the U4 package option.

Product Identification for D4, U1, U2, and U4 Packages

Products are labeled via laser marking, as seen in Figure 1.

Figure 2 details how to interpret the part marking code. Low pressure ranges from 1 to 30 inH₂O are specified with code “L” and high pressure ranges from 5 to 150 psi are specified with code “H”

The pressure range will be indicated on the same line as the wafer number before the starting character “B.”

If parylene coated, the part will be marked with a “P” on the top. Please refer to package drawings.

Example: BLC-L10D-D4

Product Identification for LD2 and LD4 Packages

If parylene coated, the part will be marked with a "P" on the top. Please refer to package drawings.
