Discharge Air Temperature Sensor

The Discharge Air Temperature sensor is used to measure the temperature of the air that is emitted from the air ducts. This temperature reading is fed back to the control module, and the system compares this temperature reading to what the occupant of the vehicle has the temperature set at on the air conditioning system. The control module calculates the temperature delta and automatically adjusts the HVAC system to minimize this temperature difference.

Applications

- Vehicles with automatic air conditioning
- Vehicle in cabin temperature measurement

Features

- High accuracy and long term stability
- Fast response time
- Small size & flexible
- Integral connector
- "Fir-Tree" or "Twist-Lock" for fast installation & easy service
- The parts passed 2000 hour + submersion test'
- Alternate RvT curves available
- Different geometries to meet package requirements
