AP-MFATX22 - AP-MFATX22

PRODUCT OVERVIEW:

Athena Computer Power is proud to introduce the new FLEX ATX power supply series. With smaller computers in demand the FLEX form factor is becoming a necessity for Mini-ITX and 1UITX computers. Not only does the FLEX hone 220 Watts of power, in this compact PSU, but it also comes with additional features such as Active PFC and the Remote ON/OFF feature.

A Perfect Fit

Like its name the FLEX ATX is a compact and flexible Power Supply. Designed for 1UITX rackmounts, Mini-ITX chassis, or as a replacement PSU for IBM SurePOS, Shuttle XPC, and HP Pavillion systems. Can be used to build media servers, business servers, and provide power for all types of kiosks.

Smart Auto Fan Speed Controller

Thermal fan speed control will detect the amount of heat generated by the computer. Using the speed controller to detect heat levels, it will automatically adjust the fan speed accordingly and the need to worry about heat levels, of a PSU, becomes almost non-existent.
