Revised 2/24

EZO-CO2™

Embedded NDIR CO2 Sensor

Reads	**Gaseous CO2**
Range	**0 – 10,000 ppm**
Calibration	**Factory calibrated**
Pressure	**Atmosphere only**
Response time	**1 reading per second**
Resolution	**1 ppm**
Accuracy	**(+/- 5%) + (+/- 50 ppm)**
Connector	**5 lead data cable**
Warmup time	**10 seconds**
Cable length	**1 meter**
Data protocol	**UART & I²C**
Default I²C address	**105 (0x69)**
Data format	**ASCII**
Operating voltage	**3.3V – 5V**
Life expectancy	**~5.5 years**

Designed by Noah Press

This is an evolving document, check back for updates.

Table of contents

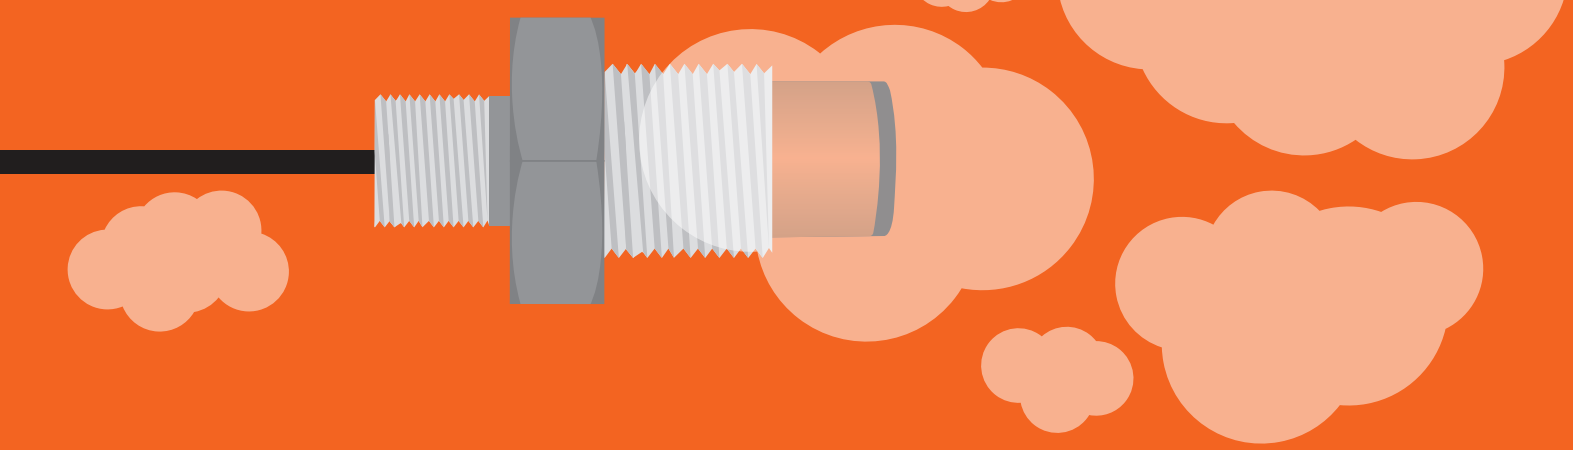
UART

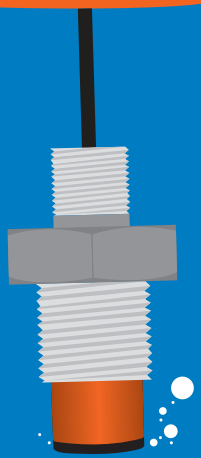
I²C

Attention

The EZO-CO2™ is 100% operational out of the box.
CALIBRATION IS UNNECESSARY

This sensor detects GASEOUS CO2



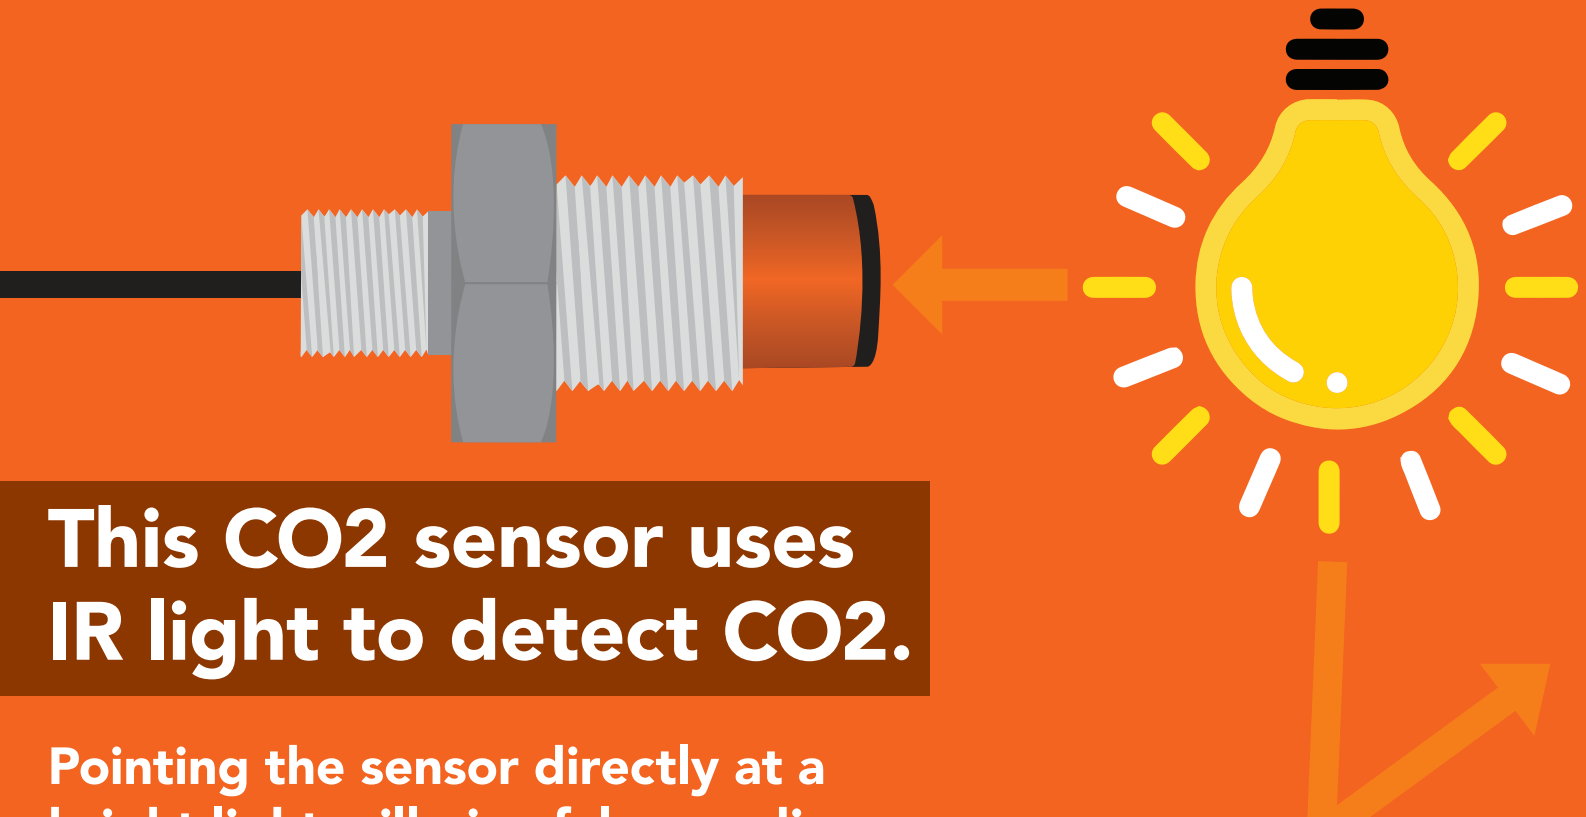


This sensor does not read dissolved CO2.
DO NOT SUBMERGE!

AtlasScientific™
Environmental Robotics

Attention

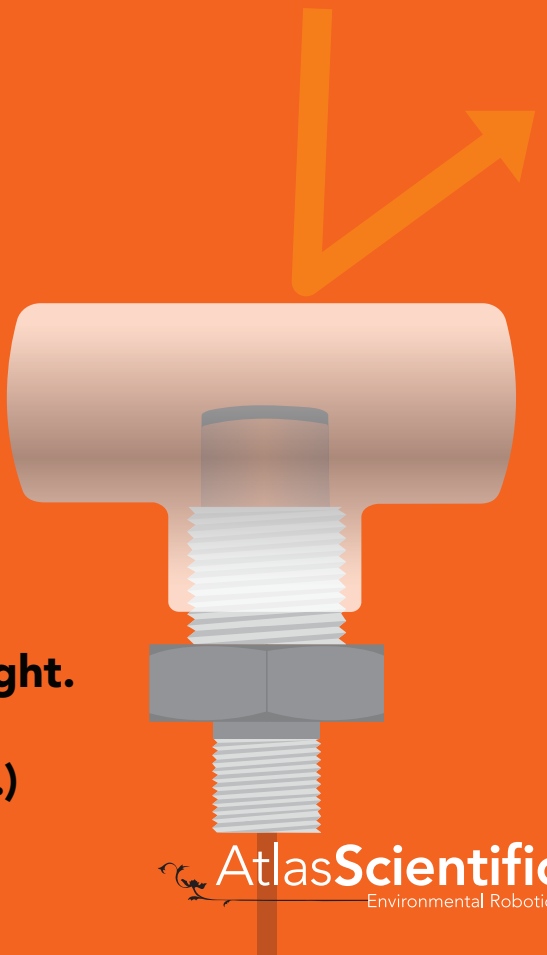
Do not point the sensor *directly* at bright lights



This CO2 sensor uses IR light to detect CO2.

Pointing the sensor directly at a bright light will give false readings.

(it will not damage the sensor.)



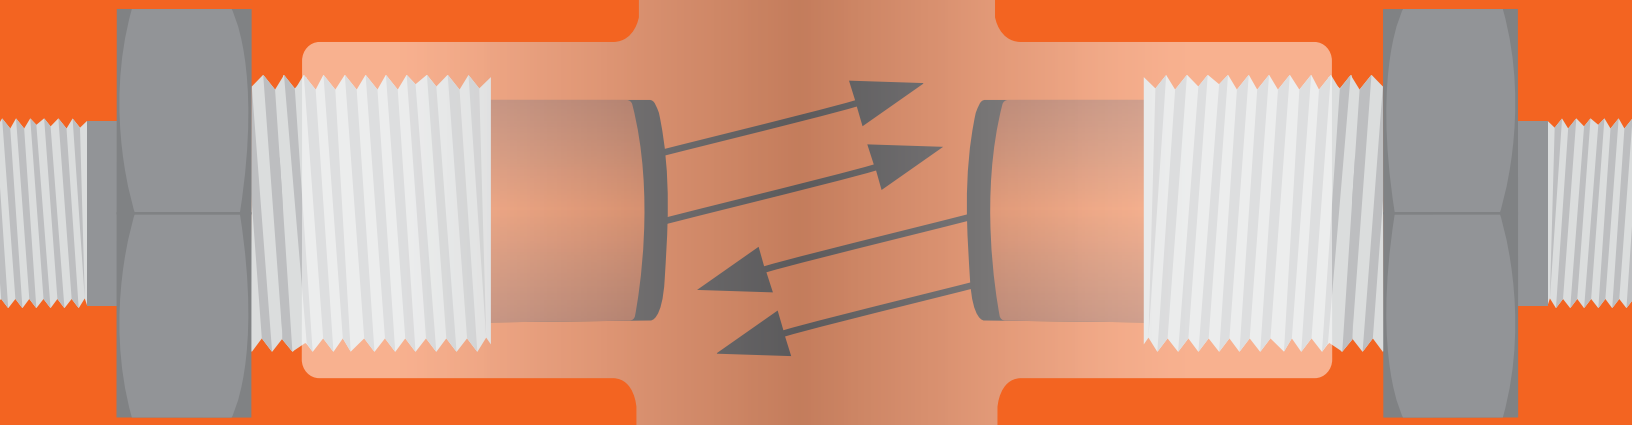
If the CO2 sensor is returning false readings when in a bright environment, try attaching a PVC Tee to the sensor, to block the direct light.

(or just don't point the sensor at bright lights.)

Atlas Scientific™
Environmental Robotics

Attention

Do not mount CO2 sensors opposite each other.

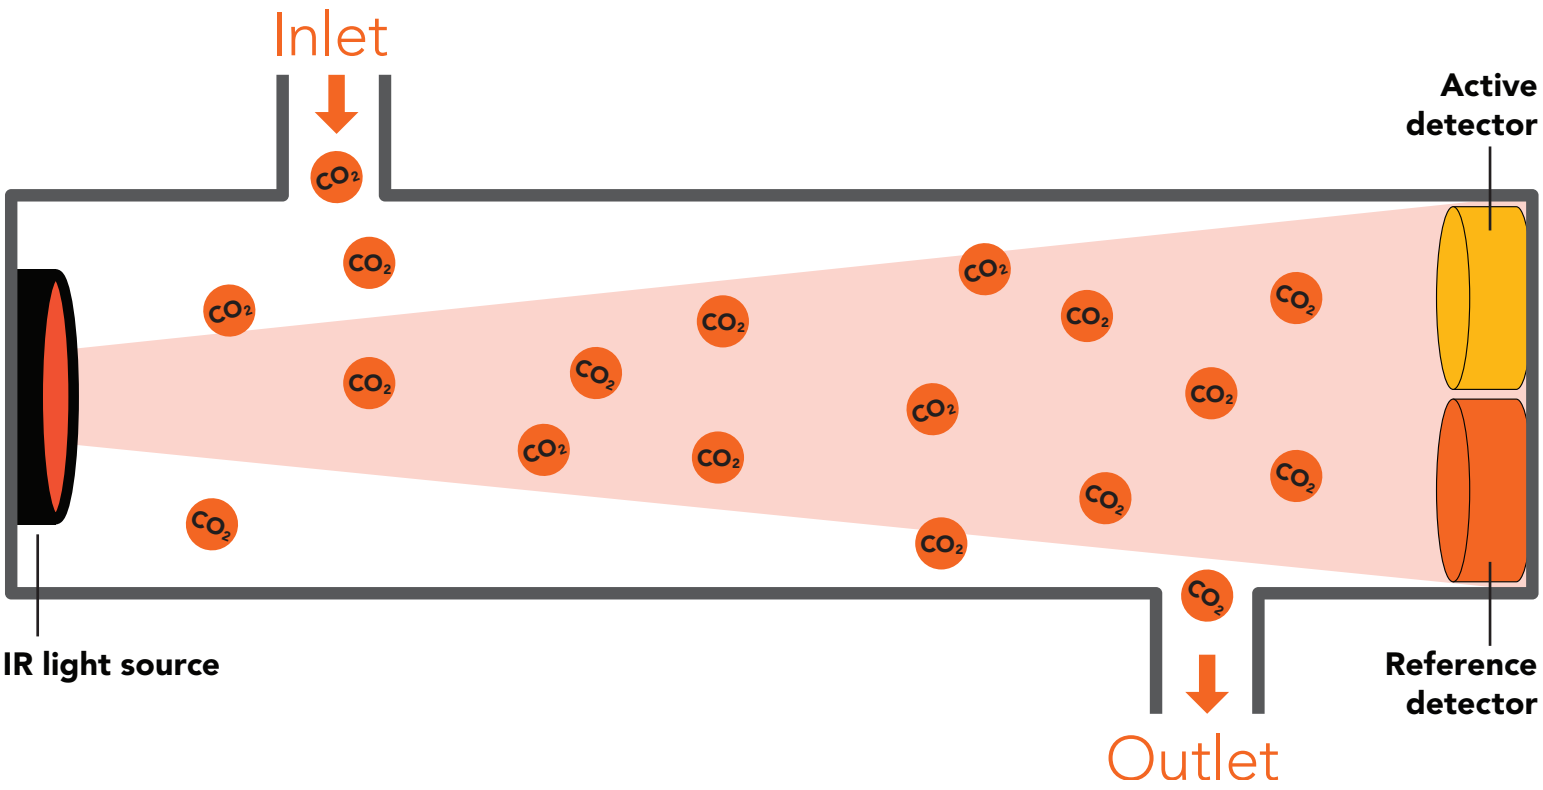


This CO2 sensor emits a small amount of IR light; the opposing sensor will detect that light. Over several hours the CO2 readings will become unstable and take on a sine wave appearance.

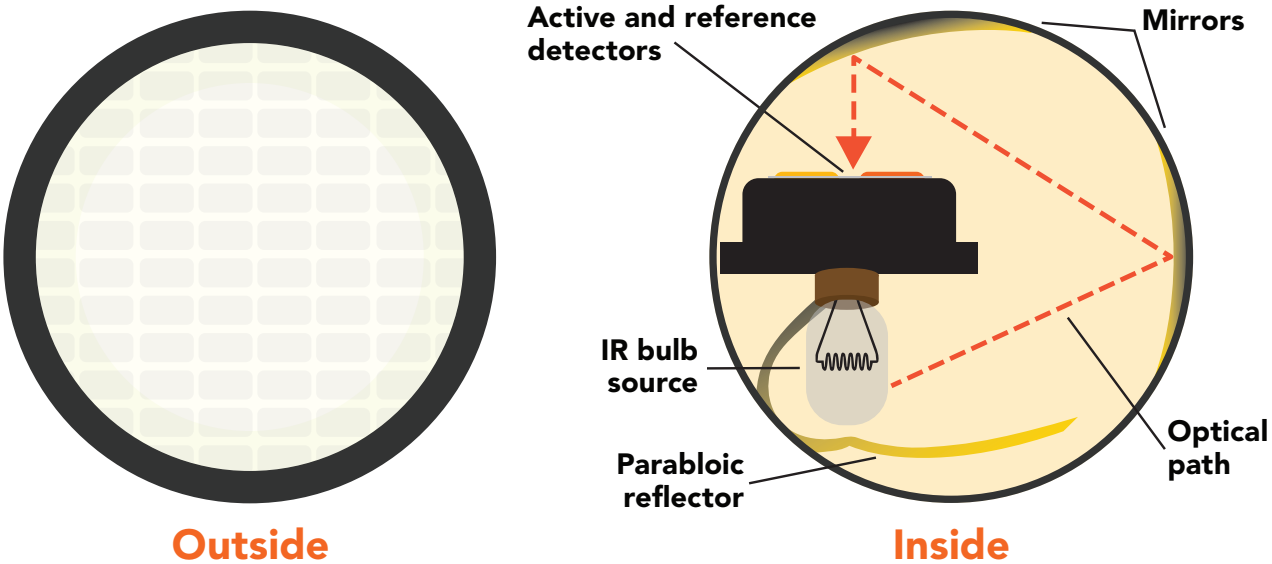
Atlas Scientific™ Environmental Robotics

Operating principle

The Atlas Scientific EZO-CO2™ Embedded CO2 Sensor uses a non-dispersive infra-red (NDIR) gas detection cell to derive CO2 content in a gaseous matrix. The NDIR detection cell is a single wavelength spectrophotometer that has been specifically designed to detect 4.2µm infrared radiation.

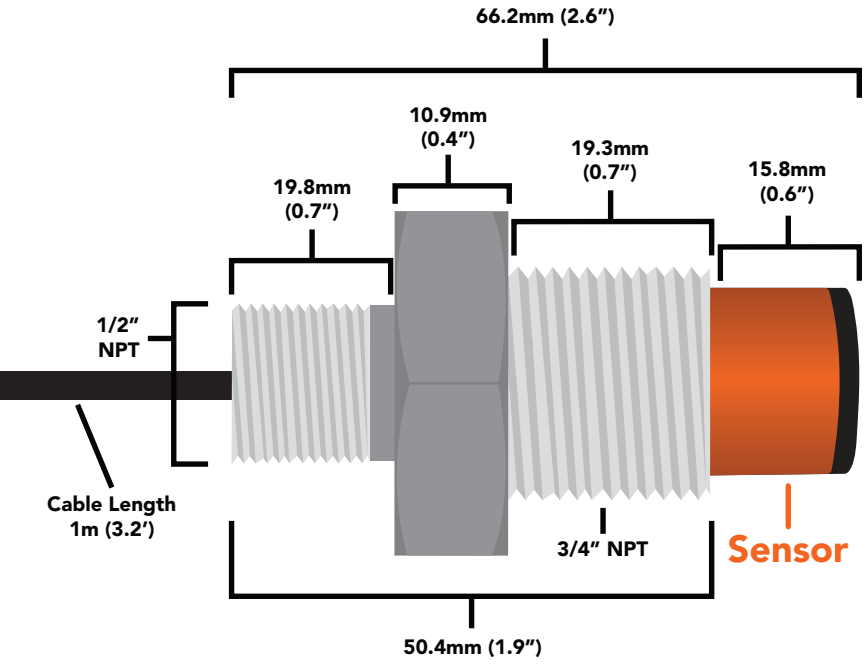


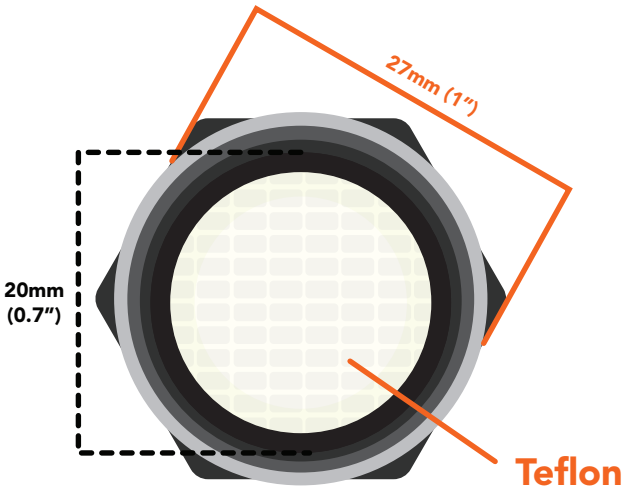
Gaseous CO2 has a prominent absorption band centered at 4.2µm. CO2 content is derived by quantifying how much light energy has been lost when it travels through a gaseous matrix over a fixed distance.



Physical properties

The EZO-CO2™ sensor only detects gaseous CO2 levels. This device cannot read dissolved CO2 levels. *DO NOT SUBMERGE IN LIQUID.*





Weight 133g

Body 316 Stainless Steel

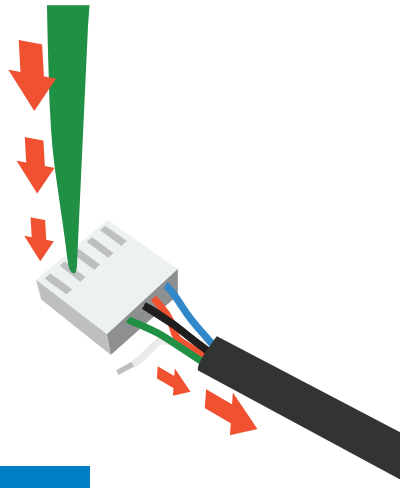
Pin out

Data and power cable pinout

White	–	RX/SCL
Green	–	TX/SDA
Black	–	GND
Red	–	VCC
Blue	–	ALM



Should you need to remove this connector from the data cable, follow the provided illustration.

The alarm pin will go high when a set CO2 level has been crossed.

If unused leave **ALM** floating. Do not connect **ALM** to **VCC** or **GND**.

See page **23** to enable CO2 level alarm in UART mode.
See page **46** to enable CO2 level alarm in I2C mode.

Power consumption

	LED	MAX	SLEEP
5V	ON	45 mA	3.4 mA
	OFF	44 mA	
3.3V	ON	42 mA	3.0 mA
	OFF	41 mA	

Absolute max ratings

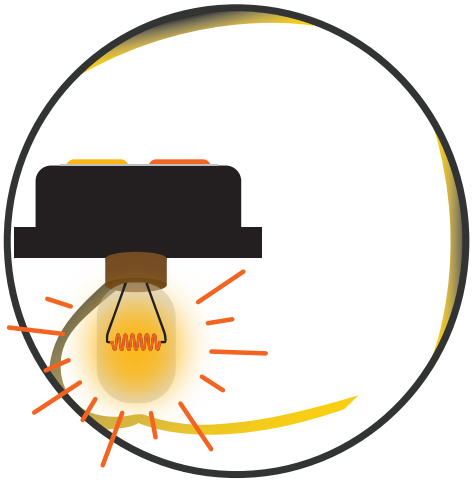
Parameter	MIN	TYP	MAX
Storage temperature	-65 °C		75 °C
Operational temperature	-20 °C	25 °C	50 °C
VCC	3.3V	3.3V	5.5V

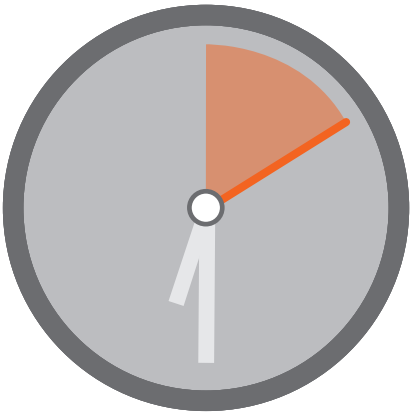
Humidity Range 0 to 95% rh non-condensing

IP60

Sensor warm-up

When the Atlas Scientific EZO-CO2™ Embedded CO2 Sensor is first powered on *(or wakes up from sleep mode)* the sensor must warm-up before it can output readings. The warm-up process takes 10 seconds to complete.

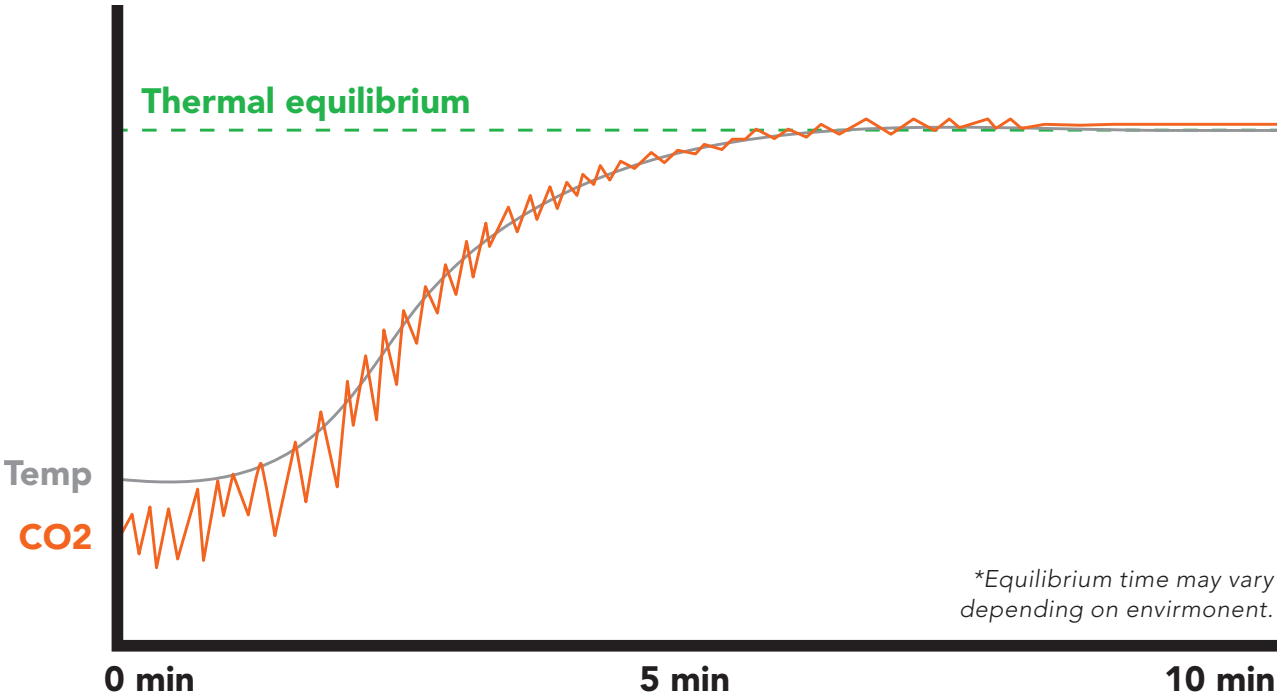




10 sec

During the first 10 seconds of operation the output will be: ***warm**

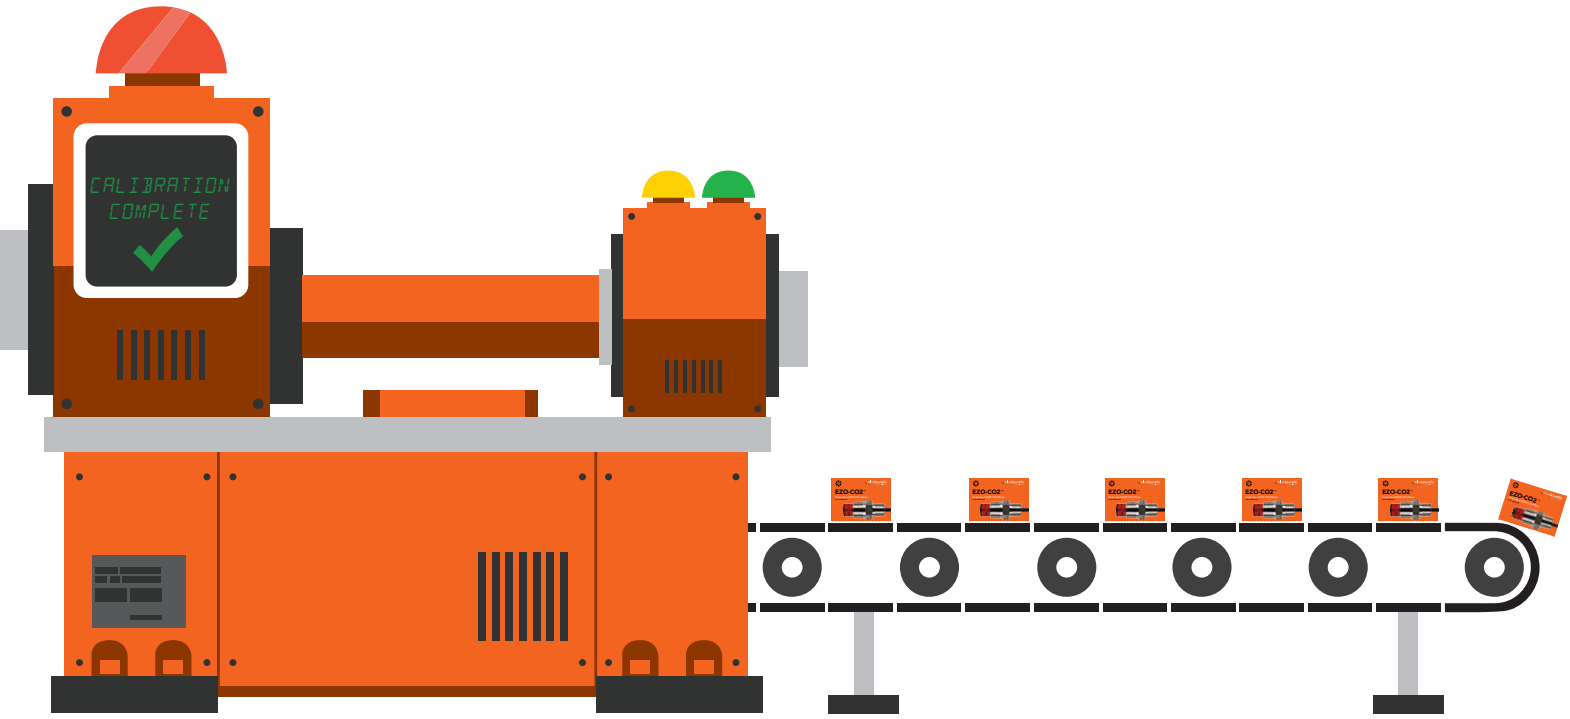
Once warming is finished, CO2 readings will be output. The device will continue to warm-up over several minutes. As the internal temperature stabilizes, so will the CO2 readings.



To see the internal temperature of the sensor and watch as it stabilizes, use the 'O' command found on page 25.

Calibration theory

The Atlas Scientific EZO-CO2™ Embedded CO2 Sensor comes pre-calibrated, and does not need to be recalibrated. Atlas Scientific performs a two-point factory calibration as part of the manufacturing process.



Low point calibration = 0 ppm
High point calibration = 4,000 ppm

The factory calibration data is permanently stored in the sensor and cannot be erased.

Custom calibration

One or two-point calibration can be done at any time. When custom calibration is used, factory calibration will be ignored. To revert back to the factory calibration simply clear the custom calibration.

See page **24** or **47** for custom calibration commands.

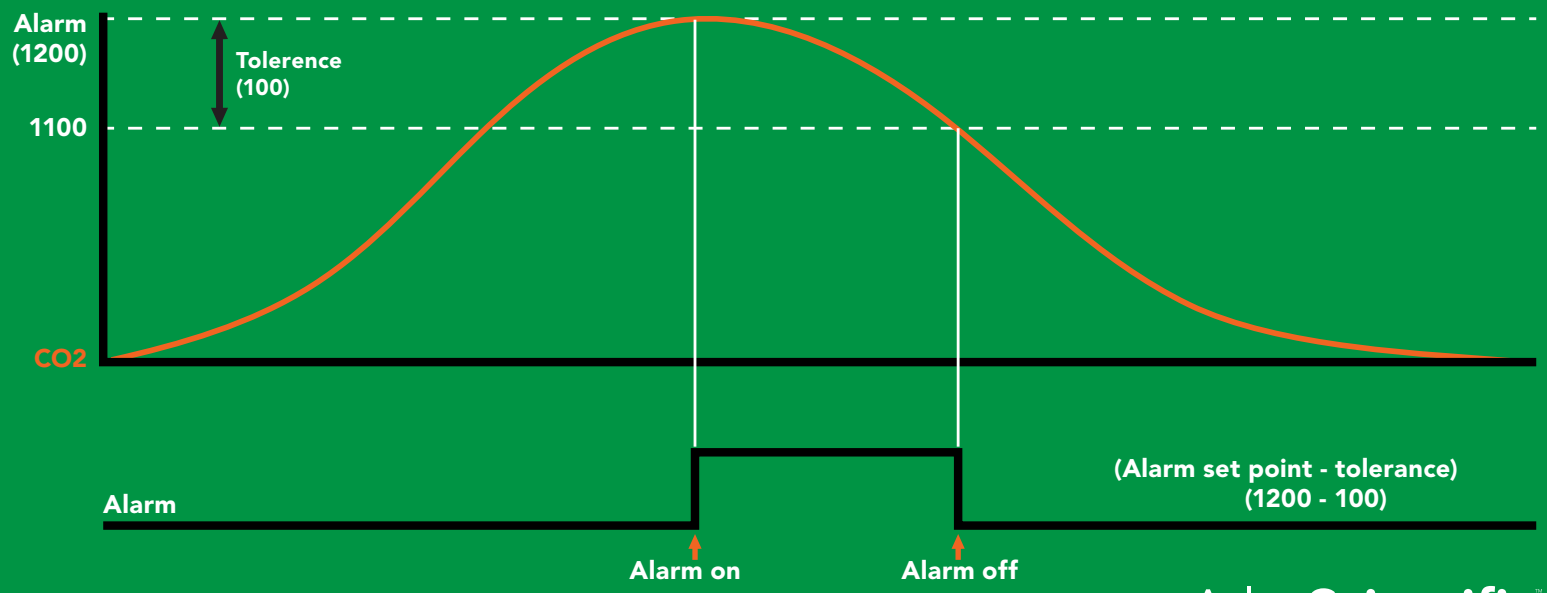
Alarm

Command syntax

The alarm pin will = 1 when CO2 levels are > alarm set point. Alarm tolerance sets how far below the set point CO2 levels need to drop before the pin will = 0 again.

Alarm,en,[1,0]	<cr>	enable / disable alarm
Alarm,n	<cr>	sets alarm
Alarm,tol,n	<cr>	sets alarm tolerance (0-500 ppm)
Alarm,?	<cr>	alarm set?

Example	Response
Alarm,en,1 <cr>	*OK <cr> Enable alarm
Alarm,1200 <cr>	*OK <cr>
Alarm,tol,100 <cr>	*OK <cr> CO2 level must fall 100 ppm below set point for alarm to reset.
Alarm,? <cr>	?,alarm,1200,100,1 <cr> if all are enabled



Atlas Scientific™ Environmental Robotics

r 0.1

Custom calibration

Command syntax

High point calibration can be from 3,000 ppm to 5,000 ppm. Calibration outside of that range my lead to accuracy issues.

Cal,n	<cr>	calibrates the high point
Cal,0	<cr>	calibrates the zero point
Cal,clear	<cr>	restores calibration to factory settings
Cal,?	<cr>	device calibrated?

Example	Response
Cal,3900 <cr>	*OK <cr>
Cal,0 <cr>	*OK <cr>
Cal,clear <cr>	*OK <cr>
Cal,? <cr>	?Cal,0 <cr> (no calibration) or ?Cal,1 <cr> (only zero point calibration) or ?Cal,2 <cr> (only high point calibration) or ?Cal,3 <cr> (zero and high point calibration) *OK <cr>

This device comes pre-calibrated.

Custom calibration should not be performed without scientific grade calibration gasses.

Atlas Scientific™ Environmental Robotics

r 0.1

Enable/disable internal temperature from output string

Command syntax

O,t,[1,0] <cr>	enable or disable internal temperature

Example	Response
O,t,1 <cr>	*OK <cr> enable temperature
O,t,0 <cr>	*OK <cr> disable temperature
O,? <cr>	?O,ppm,t <cr> if internal temp is enabled

Enabling the internal temperature should only be used to confirm that the device is at thermal equilibrium. Refer to page 6

Naming device

Command syntax

Do not use spaces in the name

Name,n	<cr>	set name
Name,	<cr>	clears name
Name,?	<cr>	show name

n = _ _ _ _ _ _ _ _ _ _ _ _ _ _ _ _

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16

Up to 16 ASCII characters

Example	Response

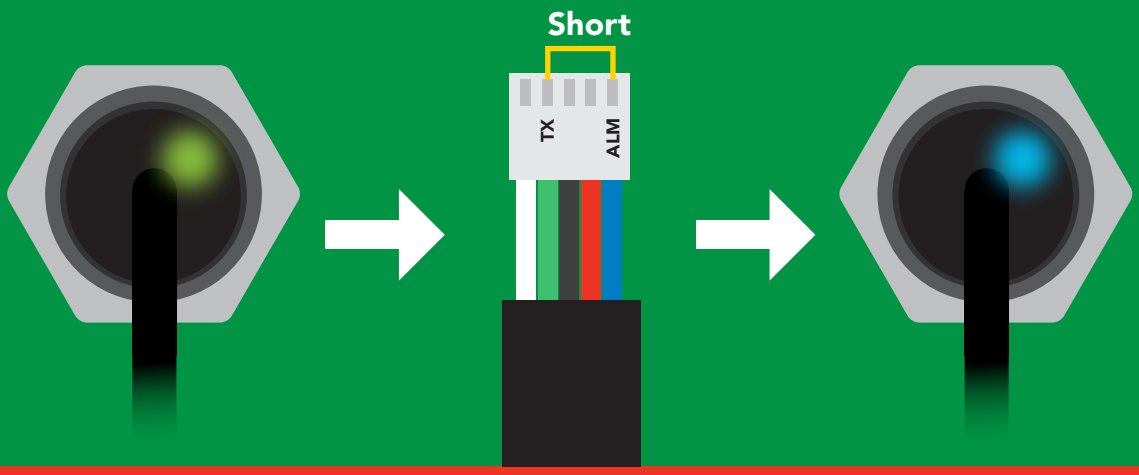
r 0.2

Manual switching to I²C

- Disconnect ground (power off)
- Disconnect TX and RX
- Connect TX to ALM
- Confirm RX is disconnected
- Connect ground (power on)
- Wait for LED to change from Green to Blue
- Disconnect ground (power off)
- Reconnect all data and power

Manually switching to I²C will set the I²C address to 105 (0x69)

Example



Wrong Example

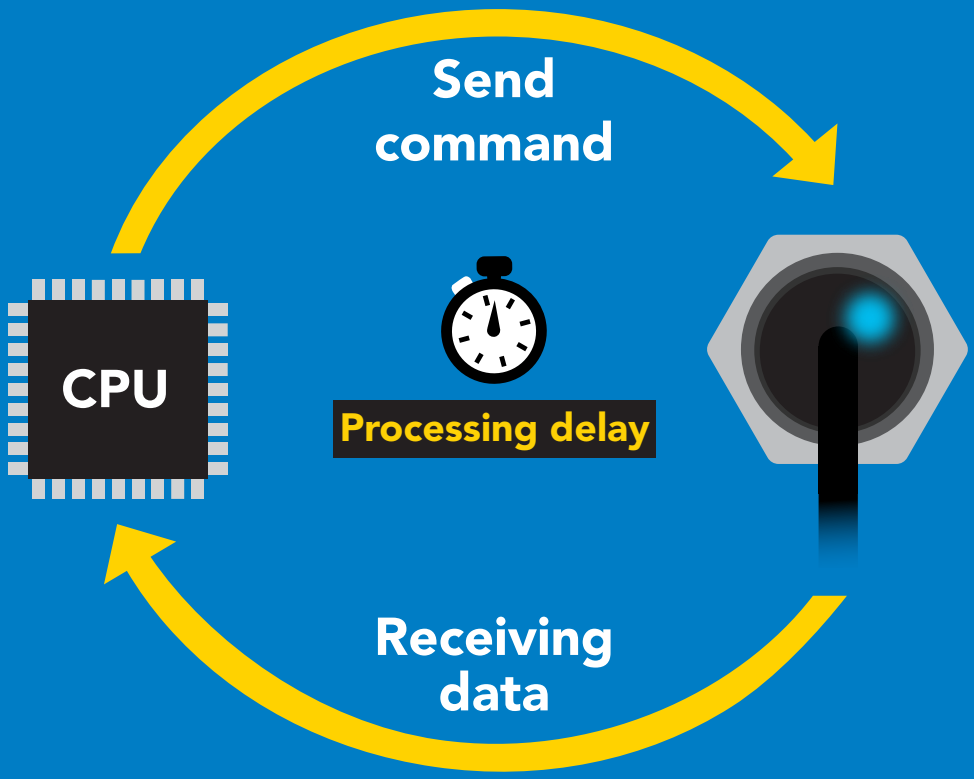
Response codes & processing delay

After a command has been issued, a 1 byte response code can be read in order to confirm that the command was processed successfully.

Reading back the response code is completely optional, and is not required for normal operation.



Example

```
I2C_start;
I2C_address;
I2C_write(EZO_command);
I2C_stop;

delay(300);   Processing delay

I2C_start;
I2C_address;
Char[ ] = I2C_read;
I2C_stop;
```

If there is no processing delay or the processing delay is too short, the response code will always be 254.

Response codes

Single byte, not string

255	no data to send
254	still processing, not ready
2	syntax error
1	successful request

V1.00 – (Sept 12, 2018)
- Initial release

V2.00 – (Jan 24, 2020)
- Changes the lamp power supply to 5V with boost converter, stops CO2 readings from going below 0.

V2.01 – (Nov 06, 2020)
- Adjusts lamp frequency to fit the lamp signal into the ADC range more consistently.

Warranty

Atlas Scientific™ Warranties the EZO-CO2™ Embedded NDIR CO2 Sensor to be free of defect during the debugging phase of device implementation, or 30 days after receiving the EZO-CO2™ Embedded NDIR CO2 Sensor (which ever comes first).

The debugging phase

The debugging phase as defined by Atlas Scientific™ is the time period when the EZO-CO2™ Embedded NDIR CO2 Sensor is connected into a bread board, or shield. If the EZO-CO2™ Embedded NDIR CO2 Sensor is being debugged in a bread board, the bread board must be devoid of other components. If the EZO-CO2™ Embedded NDIR CO2 Sensor is being connected to a microcontroller, the microcontroller must be running code that has been designed to drive the EZO-CO2™ Embedded NDIR CO2 Sensor exclusively and output the EZO-CO2™ Embedded NDIR CO2 Sensor data as a serial string.

It is important for the embedded systems engineer to keep in mind that the following activities will void the EZO-CO2™ Embedded NDIR CO2 Sensor warranty:

- **Soldering any part to the EZO-CO2™ Embedded NDIR CO2 Sensor.**
- **Running any code, that does not exclusively drive the EZO-CO2™ Embedded NDIR CO2 Sensor and output its data in a serial string.**
- **Embedding the EZO-CO2™ Embedded NDIR CO2 Sensor into a custom made device.**
- **Removing any potting compound.**

Reasoning behind this warranty

Because Atlas Scientific™ does not sell consumer electronics; once the device has been embedded into a custom made system, Atlas Scientific™ cannot possibly warranty the EZO-CO2™ Embedded NDIR CO2 Sensor, against the thousands of possible variables that may cause the EZO-CO2™ Embedded NDIR CO2 Sensor to no longer function properly.

Please keep this in mind:

1. **All Atlas Scientific™ devices have been designed to be embedded into a custom made system by you, the embedded systems engineer.**

2. **All Atlas Scientific™ devices have been designed to run indefinitely without failure in the field.**

3. **All Atlas Scientific™ devices can be soldered into place, however you do so at your own risk.**

Atlas Scientific™ is simply stating that once the device is being used in your application, Atlas Scientific™ can no longer take responsibility for the EZO-CO2™ Embedded NDIR CO2 Sensor continued operation. This is because that would be equivalent to Atlas Scientific™ taking responsibility over the correct operation of your entire device.
