

## Product Specification

### 50 GHz Photodetector

### XPDV21x0(RA)

#### PRODUCT FEATURES

- 50 GHz electrical 3 dB bandwidth
- Excellent flat response within 3 dB bandwidth
- Impressive pulse behavior
- Well matched 50  $\Omega$  output
- Unique on-chip integrated bias network

#### APPLICATIONS

- Communication system at 40 Gb/s
- High-speed lightwave characterization
- Microwave photonics up to 60 GHz

The XPDV21x0(RA) platform exhibits an optimized frequency response in both, power and phase. It is ideally suited for OC-768/STM-256 long haul systems. The on-chip integrated bias network with an optimized RF design in particular, ensures an undisturbed frequency response from DC to the 3 dB cut-off frequency and saves costs for internal bias-tees. The module is especially designed for optimal RF performance; therefore the pulse response reveals virtually no ringing. A further advantage of the waveguide structure is the unbeatable high-power behavior. The photodetector shows a linear response up to an optical input power of 10 dBm, resulting in a high output voltage swing avoiding the need for electrical amplification.

### Notice

Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operations section for extended periods of time may affect reliability.

The inherent design of this component causes it to be sensitive to electrostatic discharge (ESD). To prevent ESD-induced damage and/or degradation to equipment, take normal ESD precautions when handling this product.
