HIGH POWER AND INCREDIBLE EFFICIENCY IN OUR QUIETEST PSUS YET

HXi Series power supplies give you extremely tight voltage control, virtually silent operation, and a fully modular cable set. With all Japanese 105°C capacitors, they're a great choice for high performance PCs where reliability is essential. 80 PLUS Platinum efficiency reduces operating cost and excess heat, and together with Zero RPM Fan Mode technology, gives you virtually silent operation. With CORSAIR iCUE support, you can monitor power supply performance, toggle single rail or multi rail mode, and control fan speed directly from your desktop. And, the fully modular, low profile cable set makes builds and upgrades easy, with clean, great-looking results.

QUIET, EFFICIENT OPERATION

80 PLUS Platinum efficiency and Zero RPM Fan Mode mean that at low to medium loads, the fan doesn't spin at all. And when you do push the HXi hard, the thermally controlled fan spins only as fast as it needs to. But that's not all. It's quieter than most PSUs when the fan's not spinning, too. The HXi is built with capacitors and other internal components specially selected to reduce coil whine and other electronic noise.

EASY INSTALLATION

The fully modular, low-profile cable set allows for quick and easy installation and great-looking builds. The fan self-test switch lets you quickly confirm operation before you even attach cables to your motherboard.

iCUE  
A CORSAIR INTERFACE

INTELLIGENT CONTROL. UNLIMITED POSSIBILITIES.

CORSAIR iCUE provides in-depth PSU voltage and performance monitoring, as well as stunning system-wide RGB lighting synchronization.
