SE23497F

Specifications and Applications Information

06/26/07

Preliminary

8m Class
DC to AC Inverter

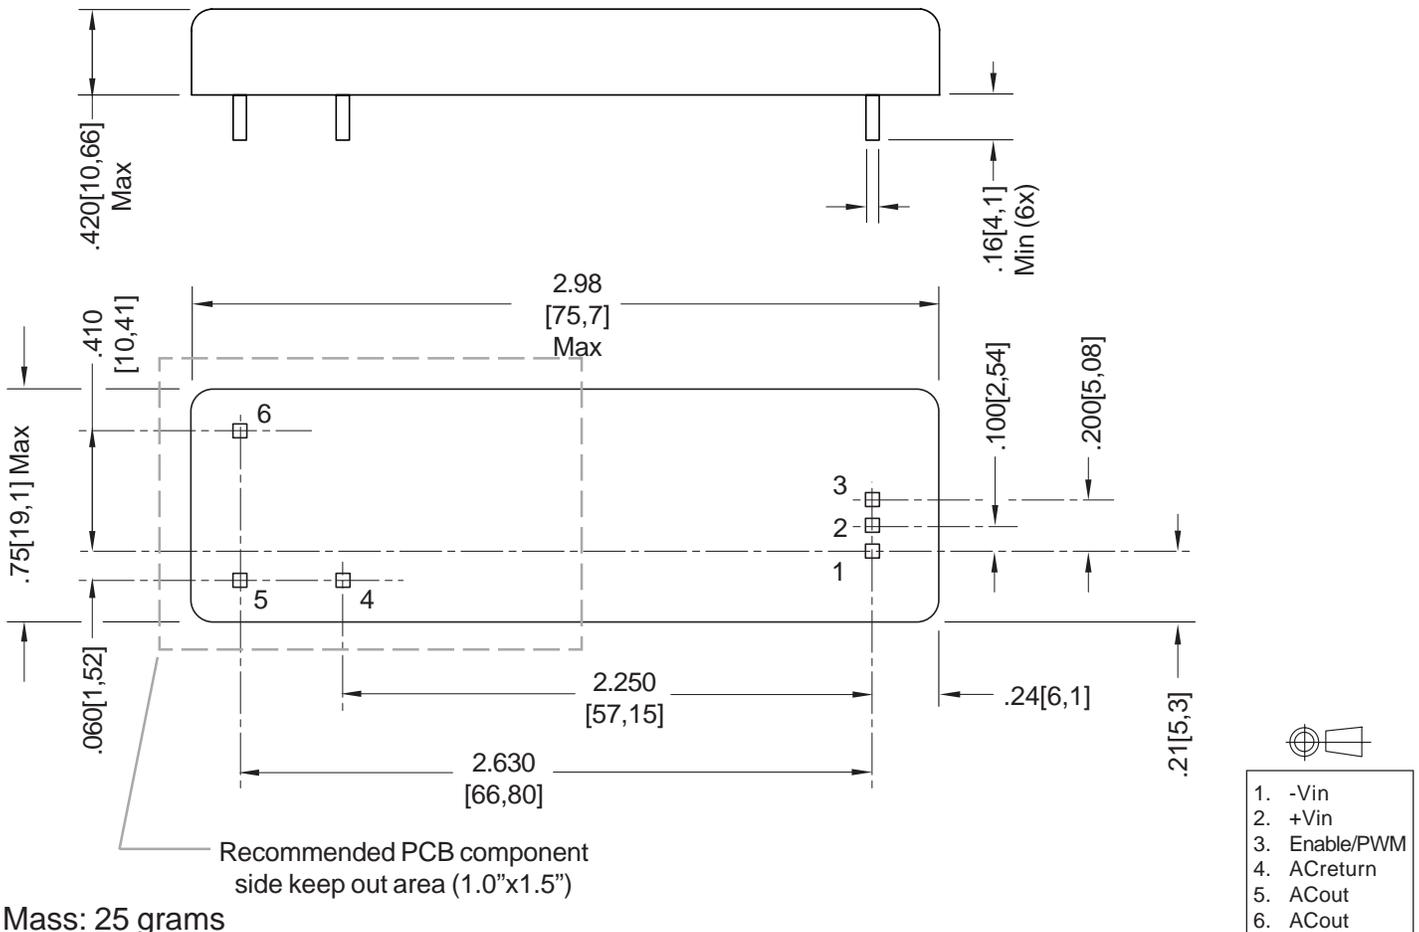

The SE23497F (*S-Series*) dc to ac inverter is specifically designed to power the NEC NL6448BC26-09 display to a moderate brightness level from a +5 volt dc source.

The SE23497F's small size and encapsulated package make it the ideal power source for applications where size, high efficiency and reliability are critical.

This standard inverter is designed to satisfy the most common cold-cathode lighting requirements for the display. Custom units, providing different inputs, outputs or package refinements are available.

Specifications subject to change without notice.

(Note 1) Input current in excess of maximum may indicate a load/inverter mismatch condition, which can result in reduced reliability. Please contact ERG technical support.

(Note 2) Surface temperature must not exceed 80 degrees C; thermal management actions may be required.

(Note 3) Provided data is not tested but guaranteed by design.

(Note 4) Required User Enable/Disable Interface Circuit is shown on page 3.

Application Notes:

- 1) Printed circuit boards to be free of traces beneath the inverter.
- 2) The minimum distance from high voltage areas of the inverter to any conductive material should be .12 inches per kilovolt of starting voltage.
- 3) Contact ERG for possible exceptions.

PWM Dimming

Required User Enable/Disable Interface Circuit

- (1) Low ESR type input by-pass capacitor (22 uf - 100 uf) may be required to reduce reflected ripple.
- (2) V_{PWM} from 2.4V to less than or equal to 13.2V.
- (3) Full brightness without PWM control requires that pin 3 be tied to $V_{in}(+)$. Pin 3 must be at 0V to turn off.
- (4) Duty Cycle 5% - 100%.
