

■ Features

- Side-looking package
- Fast response time
- Miniature and thin
- High sensitivity
- Cut-off visible wavelength

■ Descriptions

The dip type **ITR20904** consists of an infrared emitting diode and an silicon phototransistor, encased side-by-side on converging optical axis in a black housing. The phototransistor receives radiation from the IR only. This is the normal situation. But when a reflecting object close to ITR, phototransistor receives the reflecting radiation and the different distance have different light current.

■ Applications

- Printer
- Switch Scanner
- Non-contact Switching
