

FSM-IMX283 Datasheet

Sony IMX283CQJ Sensor Module

FRAMOS Sensor Module

Key Benefits & Features:

- 20.2 Mpx Sony CMOS Rolling Shutter sensor module, ready to embed!
- All FSMs are part of a rapid prototyping ecosystem, consisting of:
 - ✓ Adapters to various processing boards
 - ✓ Design sources for deep embedding
 - ✓ Various accessories and design in services

FSM-IMX283C (Color):

Specification	
Model Name	FSM-IMX283C (v1a)
Image Sensor	
Vendor / Name	Sony IMX283CQJ
Technology	CMOS Rolling Shutter
Chromaticity	Color
Optical Format	1"
Pixel Size	2.4 x 2.4 μ m
Max. Resolution	20.2 Mpx / 5496 x 3672 px
Framerate (max.)	25 FPS (at max. resolution)
Bit Depth(s)	9 / 10 / 12 bit
Interface	
Module Interface	MIPI CSI-2 (4 Lane)
Control Interface	I ² C
Clock Frequency(s)	6 to 27 MHz
Voltage Requirements	1.2V / 1.8V / 2.9V
Interface Connector	Hirose DF40C-60DP-0.4V(51)
EEPROM (Sensor ID)	Yes
Mechanical	
Dimensions (HxWxD)	26.5 mm x 26.5 mm
Environmental	
Operating Temperature	-10°C to +75°C (function) -10°C to +60°C (performance)
Storage Temperature	-30°C to +80°C
Ambient Humidity	20% to 95% RH, non condensing
Software Support	
Driver	V4L2 Based Device Driver
Supported Platform(s)	NVIDIA Jetson TX2 / AGX Xavier
Linux Version(s)	L4T 32.2.1 (JetPack 4.2.2)
API Languages	C / C++
Suggested Accessories	
Flex Cable 150 mm (FSM to FSA)	FMA-FC-150/60
Lens Mounts:	C/CS-Mount
A matrix with compatible <i>Sensor Adapters (FSA)</i> and <i>Processor Board Adapters (FPA)</i> for single- and multi-sensor setups can be found separately at the end of this document.

1 FRAMOS Sensor Module Ecosystem

The FSM Ecosystem consists of FRAMOS Sensor Modules, Adapters, Software and Sources, and provides one coherent solution supporting the whole process of integrating image sensors into embedded vision products. During the evaluation and proof-of-concept phase, off-the-shelf sensor modules with a versatile adapter framework allow the connection of latest image sensor technology to open processing platforms, like the NVIDIA Jetson TX2, AGX Xavier or the 96boards.org standard, with no effort. Exemplary drivers and sample applications deliver images immediately after installation, supporting V4L2 and an own optional API for comfortable integration. Within the development phase, electrical design references and driver sources guide with a solid and proven baseline to quickly port into individual system designs and extend scope, while decreasing risk and efforts.

To massively simplify and relieve the whole supply chain, all FRAMOS Sensor Modules and adapters are optimized and ready for delivery in volume, pre-configured with lens holder, lens and further accessories.

Key Benefits & Features

Hardware Offering:

- Off-the-shelf *FRAMOS Sensor Modules (FSM)*, ready for evaluation and mass production.
- Versatile adapter framework, allowing flexible testing of different modules, on different processing boards:
 - *FRAMOS Sensor Adapter (FSA)* – everything the specific sensor needs for operation
 - *FRAMOS Processor Adapter (FPA)* – connecting up to four FSM + FSA to a specific processor board
- From lenses, mechanics and cables, all needed imaging accessories from one hand

Software Package:

- Drivers providing base level sensor integration:
 - Platform specific device drivers
 - V4L2 subdevice drivers for specific image sensors (low-level C API)
- Streamlined V4L2 library (LibSV) with comfortable and generic C/C++ API
- Example application demonstrating initialization, basic configuration and image stream processing

Further to off-the-shelf hard- and software, the Ecosystem supports you with:

- Driver sources allowing the focus on application specific scope and features
- Electrical references for FSA and FPA, supporting quick and optimized embedding of FSMs
- Engineering services via FRAMOS and its partners, allowing you to focus on your product's unique value!

2 Ecosystem Compatibility Matrix

2.1 Hardware Support

The following matrix shows the compatibility of FSMs, FSAs and FPAs to each other. The FSAs differentiate to each other by supplied voltages, power up sequence, generated clock (oscillator) and physical attributes.
