## PDC-650WA-BE (650 W DC PoE Power Module)

**Product Support****Table 5-21** lists the switch models supporting a 650 W DC PoE power module.**Table 5-21** Product support for a 650 W DC PoE power module

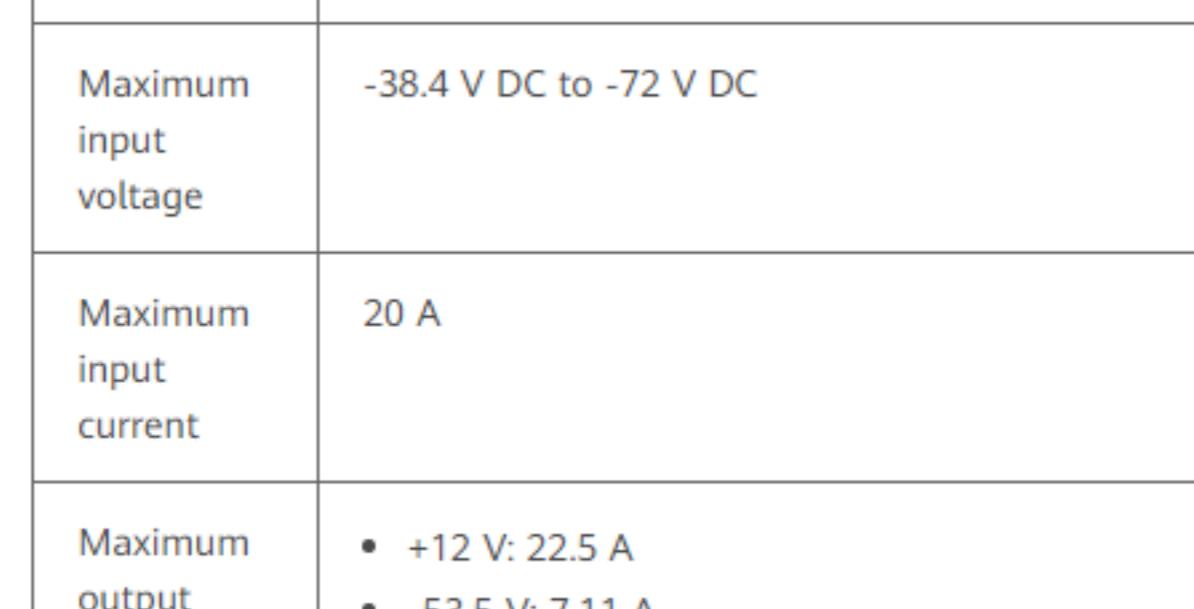

Power Module Name	Product Support
PDC-650WA-BE	S6720-32C-PWH-SI-AC, S6720-32C-PWH-SI, S6720-52X-PWH-SI, S6720-56C-PWH-SI-AC, S6720-56C-PWH-SI

**Appearance****Figure 5-11** Appearance of a 650 W DC PoE power module (PDC-650WA-BE)**Function****Table 5-22** describes the functions of a 650 W DC PoE power module.**Table 5-22** Functions of a 650 W DC PoE power module

Function	Description	
Input protection	Input undervoltage protection	In this protection state, the power module stops supplying power. When the input voltage restores to the normal range, the power module automatically resumes power supply.
	Input overcurrent protection	In this protection state, the power module stops supplying power and cannot automatically start supplying power again when the input current restores to the normal range.
Output protection	Output overvoltage protection	In this protection state, the power module stops supplying power intermittently. When the system recovers from output overvoltage, the power module automatically resumes power supply.
	Output overcurrent protection	In this protection state, the power module supplies power intermittently. When the output current is within a range, the power module automatically resumes power supply.
Output short-circuit protection		In this protection state, the power module supplies power intermittently. When the short circuit is removed, the power module automatically resumes power supply.
Overtemperature protection		When the temperature of the power module exceeds a specified threshold, the power module stops supplying power. When the temperature falls into the normal range, the power module automatically resumes power supply.
Hot swapping	Supported	

**NOTE**

When a power module enters overtemperature protection state, take measures to lower the ambient temperature. The power module can automatically start supplying power again when the temperature falls within the normal range.
