# **175 WATTS**

### SINGLE OUTPUT AC-DC

### FEATURES:

- Compact 3.0" x 5.0" x 1.25" Size IEC 60601-1 3rd ed. Medical Cert.
- 3 Year Warranty
- Universal 85-264V Input
- Single High Efficiency Output
- Power Fail Warning
- 0-70°C Operating Temperature
- RoHS Compliant
- IEC 60601-1-2 4<sup>th</sup> ed. EMC
  Class B Emissions per EN55011/32
- Optional Single Wire Load Sharing

• IEC 62368-1 2<sup>nd</sup> ed. Certification

- Optional Remote Inhibit/Enable
- Optional Chassis/Cover

Please refer to Output Power Derating chart.

### ORDERING INFORMATION

Consult factory for alternate output configurations. Please specify the following optional features when ordering:

- CH Chassis
- CO Cover
- LS Single Wire Load Sharing

LSEVB - Load Share Evaluation Board RE - Remote Inhibit WT – Low Temperature Turn On

All specifications are maximum at  $25^{\circ}$ C/175W unless otherwise stated, may vary by model and are subject to change without notice.

## NXT-175 TPUT SPECIFICATIONS

	UT SPECIFI	
Output Power at 50°C(1)	115W	Convection Cooled, Open Frame
(See Derating Chart)	175W	300 LFM Forced-Air Cooled(15)
Power Derating	1.0 WOUT / 1 VIN B	
Voltage Centering	$\pm 0.5\%$	(50% load)
Voltage Adjust Range	95-105%	
Load Regulation	0.5%	(0-100% load change)
Source Regulation Noise	1.0% or 100mV	Whichever is greater
Turn on Overshoot	None	
Transient Response		o within 1% of initial set point due
		d change, 500µS maximum,
Overvoltage Protection	4% maximum dev	n 110% and 150% of rated output voltage.
Overpower Protection		Pout, cycle on/off, auto recovery
Hold Up Time		ower, 85-264V Input
Start Up Time	3 Seconds, 120V	Input
	T SPECIFIC	CATIONS
Protection Class		
Source Voltage	85 - 264 Volts A0	<u>}</u>
Frequency Range Input Protection(6)	47 – 63 Hz Internal 5A Time	Delay fuse
Peak Inrush Current	50A (cold)	Delay luse
Efficiency	85% Typical, Full	Power varies by model
Power Factor	0.95 (Full Power,	230V), 0.98 (Full Power, 120V)
		ECIFICATIONS
Ambient Operating	0°C to + 70°C	(100% load)
Temperature Range Ambient Storage Temp. Range	Derating: See Por - 40°C to + 85°C	wer Rating Chart
Operating Relative Humidity Range	20-90% non-conc	lensing
	3,000m ASL – Op	perating
Altitude	12,192m ASL - N	Ion-Operating
Temperature Coefficient	0.02%/°C

### NXT-175 SERIES MECHANICAL SPECIFICATIONS

ALL DIMENSIONS IN INCHES (mm)

#### CONNECTOR SPECIFICATIONS

P1 • NEUTRAL • LINE	AC Input	0.156 friction lock header mates with Molex 09-50-3031 or equivalent crimp terminal housing with Molex 2478 or equivalent crimp terminal.
Р2 ОИТРИТ 1 (-) 🕞 🚱 ОИТРИТ 1 (+)	DC Output	6-32 screw down terminal mates with #6 ring tongue terminal. (10 in-lb Max)
P3           SHARE BUS         5           P.F. SIG (+)         6           SENSE (-)         7           SENSE (+)         8	Power Fail, Load Share, Sense	0.100 friction lock header mates with Molex 22-55-2081 or equivalent crimp terminal housing with Molex 71851 or crimp equivalent terminal.
P4 INHIBIT 3 2 INHIBIT RTN STBY PWR (+) 4 • 1 STBY RTN (-)	Inhibit, Standby Power	0.100 friction lock header mates with Molex 22-55-2041 or equivalent crimp terminal housing with Molex 71851 or equivalent crimp terminal.
	Ground	0.187 quick disconnect terminal.

### **APPLICATIONS INFORMATION**

- 1. Continuous Output Power must not exceed 175W.
- Generally, adequate cooling is provided when semiconductor case temperatures do not exceed 70°C rise and transformer temperature does not exceed 60°C rise at any specified ambient temperature.
- Sufficient area must be provided around power supply to allow natural movement of air to develop in convection-cooled applications.
- 4. This product is intended for use as a professionally-installed component within information technology, industrial, and medical equipment and is not intended for stand-alone operation.
- A minimum load of 10% is required on Output 1 to ensure proper regulation of remaining outputs.
- This product includes only one fuse in the input circuit. In consideration of clause 8.11.5 of IEC 60601-1:2005, a second fuse may be required in neutral conductor of the end product.
- Peak-to-Peak Output Ripple and Noise is measured directly at the output terminals of the power supply, without the use of the probe ground lead or retractable tip (tip-and-barrel method), 20MHz bandwidth.
- 8. This product was type-tested and safety-certified using the dielectric strength test voltages listed in Table 6 of IEC 60601-1:2005. In consideration of Clause 8.8.3, care must be taken to insure that the voltage applied to a reinforced insulation does not overstress different types and levels of insulation. Primary and secondary-to-ground capacitors may need to be disconnected prior to performing a dielectric strength test on the power supply or the end product. It is highly recommended that the DC test voltages listed in DVB.1, Annex DVB of UL 60601-1 1st Edition are not exceeded during a production-line dielectric strength test of the assembled end product. Please consult factory for further information.
- This power supply has been safety-approved and final-tested using a DC dielectric strength test. Please consult factory before performing an AC dielectric strength test.
- Remote-Sense terminals may be used to compensate for cable losses up to 400mV depending on model. The use of a twisted pair, decoupling capacitors and an appropriately-rated lowimpedance capacitor connected across the load will increase noise immunity.
- Maximum screw penetration into bottom chassis mounting holes is 0.100 inches. Maximum screw penetration into side chassis mounting holes is 0.250 inches.
- 12. To comply with emissions specifications, all four mounting hole pads must be electrically connected to a common metal chassis. Chassis/Cover option is recommended. Refer to Operating Instructions for additional information.
- Common RF shielding precautions may need to be taken to assure emissions compliance. Refer to Operating Instructions for additional information.
- Power Fail (AC-Good) feature provides a logic-low warning signal from an open collector transistor output 10ms prior to loss of output from AC failure.
- 15. 300LFM of airflow must be maintained one inch above the top of the heatsinks in any direction in open-frame forced-air applications; and one inch above and toward any of the three perforated sides of the cover in forced-air Chassis/Cover applications.
- 16. Low forward-voltage-drop oring diodes must be used in all load-sharing applications in 2.5 through 15V models. Oring diodes must be used on 24 through 48V models used in fault-tolerant applications but are optional in power-boosting applications. Oring diode power dissipation must be subtracted from the maximum output-power rating of each model.
- 17. Current-carrying conductors in load-sharing applications must be short and symmetrical.
- Refer to Load-Share Evaluation Board data sheet (page 58) for additional load-share applications information.
- A load equal to 5% rated Output Power must be maintained when using Standby Power option. An external electrolytic capacitor across standby power output may be used to improve transient response.

### MAX Pout vs. AMBIENT TEMPERATURE/INPUT VOLTAGE

 $\begin{array}{l} \textbf{Derating requirements} - Chart \ above \ applies \ to \ models \ 1003 \ thru \ 1008 \ only. \ 175W \ 300LFM \ forced \ air, \ open \ frame. \ 115W \ convection \ cooled \ open \ frame. \ Derate \ 10\% \ with \ chassis \ and \ cover. \ Derate \ 1.0W_{OUT} \ / 1V_{IN} \ below \ 100V_{IN} \ and \ between \ 100V_{IN} \ and \ 85V_{IN}. \ Use \ larger \ of \ the \ two \ deratings \ when \ using \ chassis/cover \ below \ 100V_{IN}. \ Derate \ output \ power \ linearly \ to \ 50\% \ between \ 50^\circ \ and \ 70^\circC. \end{array}$ 

### **TYPICAL LOAD SHARE/REMOTE APPLICATION**
