

CONTROLLED WALL PLATE NEMA 5-15R (12A RATED)

CWP-115 |

FEATURES & BENEFITS

The Controlled Wall Plate provides electricity and power switching capabilities to devices for simplified control from a convenient location. Ideal for powered loudspeakers, the Controlled Wall Plate delivers exceptional value without the complexity and expense of breaker panels or multiple high/low voltage boxes. With the unique design of low voltage, integrated contact connections located at the rear, the Controlled Wall Plate offers an aesthetically-pleasing, robust, and secure solution. The internal power supply ensures no reliance on external input voltage. The compact, single gang form factor fits standard wall or floor boxes or within a partitioned, multi-use box. Additionally, at an attractive price point, this solution delivers a simplified way to control lights, displays, projectors and other devices.

*Compliant with 2014 NEC, CA Title 24 - 2013, and ASHRAE 90.1 - 2010, 2013.

- Dry contact closure input with no external voltage required for control
- Rear integrated contact closure to alleviate the need to run the control wire to the front of the wall plate
- Compact, Decorator-style insert complete with metal wall plate to fit any standard single gang box
- LED indicator when the receptacle is active

SPECIFICATIONS
