NOTE

1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25℃ of ambient temperature.
2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf parallel capacitor.
3. Please see "DIP switch table".
4. Derating may be needed under low input voltage. Please check the static characteristics for more details.
5. Length of set up time is measured at first cold start. Turning ON/OFF the power supply may lead to increase of the set up time.
6. Efficiency is measured at 900mA/67V output set by DIP switch.
7. To fulfill requirements of the latest ErP regulation for lighting fixtures, this LED power supply can only be used behind a switch without permanently connected to the mains.
8. The power supply is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again.

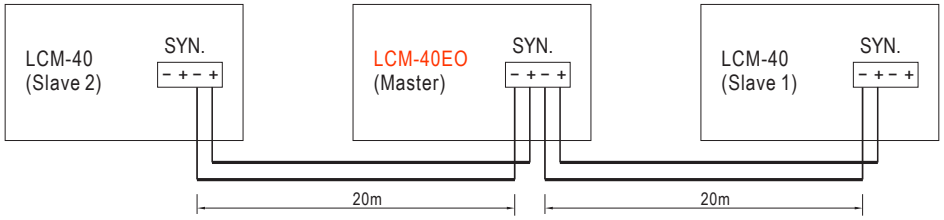
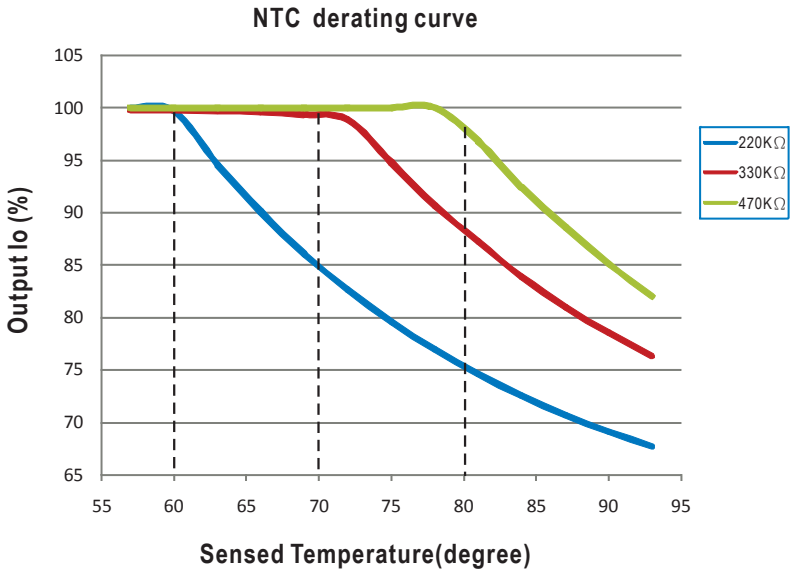
■ SYNCHRONIZATION OPERATION

- 10 drivers(max.) synchronization (1 master + 9 slaves)
- Maximum cable length between each units : 20 meter.



NOTE: Please make sure all units are set to 100% dimming setting(factory default) before synchronizing.

■ TEMPERATURE COMPENSATION OPERATION



LCM-60EO have the built-in temperature compensation function (T ↑ ,Io ↓). By connecting a temperature sensor (NTC resistor) between the NTC +/- terminal of LCM-60EO and the detecting point on the lighting system or the surrounding environment, output current of LCM-40EO could be correspondingly changed to ensure the long life of LED.

1.LCM-60EO can still be operated well when the NTC resistor is not connected and the value of output current will be the current level that you set through the DIP switch.

2.

NTC resistance	Output Current
220K	< 60℃, 100% of the rated current (corresponds to the setting current level) > 60℃, output current begin to reduce, details please refer to the curve.
330K	< 70℃, 100% of the rated current (corresponds to the setting current level) > 70℃, output current begin to reduce, details please refer to the curve.
470K	< 80℃, 100% of the rated current (corresponds to the setting current level) > 80℃, output current begin to reduce, details please refer to the curve.

Notes: 1. MW does not offer the NTC resistor and all the data above are measured by using THINKING TTC03 series.
2. If other brands of NTC resistor is applied,please check the temperature curve first.
3. Synchronization function of the power supply will be invalid when the "temperature compensation" function is in use.

■ LRN button description

LRN (Learn) Button:
Shortly press (around 2 second) the button to enter linking (pairing) / unlinking mode.
The LED lamp connected at the output of LCM starts toggling between 10% and 90% indicating that linking mode is active. Once activated, this mode stays temporary active to provide time to link or unlink multiple switches. The mode will stop and back to normal mode after 30 seconds if no wireless telegram from switch is received.

For the switch to be linked, click the “I” button (top button marked on the switch plastic or “I” symbol on the back of the switch 4 times quickly. In case the output of LCM is continuous 100% 4 seconds, it mean the switch is linked successfully.

LCM-40/60EO is now ready to accept new links on another switch.

In case a linked switch to be unlinked, please use the same action as described from the linking method above.

To exit linking / unlinking mode and return to normal operation, wait 30s without doing anything or shortly press the button again.

In order to clear all linked switches and reset the LCM-40/60EO to factory settings, please press and hold the button for 10 seconds.

■ Installation & Pairing

Hareware connection:

1. Connect the LED lamp to the driver.
2. Connect the driver to the AC mains.

There are two approaches for linking(pairing):

1. Using the LRN button on the driver

The instruction is in the LRN button description.

2. Using the NAVIGAN wireless software

Benefit to use NAVIGAN is more dimming parameters can be configured .

The software can be download in the website link below.
http://www.navigan.com/
After the software installation, insert the USB300 into one of USB port from the computer.

For more details, please check the manual.
