| Product Overview                 | Technical Specifications                                                                                                                                          | Ratings & Reviews |
|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| Galaxy 5000 Features & Benefits  |                                                                                                                                                                   |                   |
| Serviceability                   |                                                                                                                                                                   |                   |
| Front-access servicing           | Simplifies installation and UPS maintenance while minimizing space requirements.                                                                                  |                   |
| 7x24 telephone technical support | Our experienced technical support engineers are available to answer your questions, giving you peace of mind knowing the help you need is there when you need it. |                   |
| Multiple levels of service       | With the option of packages or individual service components, our services are structured to allow you to pick and choose what you would like APC to do for you.  |                   |
| Availability                     |                                                                                                                                                                   |                   |
| Frequency and voltage regulation | Gives higher application availability by correcting poor frequency and voltage conditions without using the battery.                                              |                   |
| Adjustable voltage sensitivity   | Provides the ability to adapt the UPS for optimal performance in specific power environments or generator applications.                                           |                   |
| Parallel-capacity capable        | Increases total power capacity by using multiple uninterruptible power supplies simultaneously.                                                                   |                   |
| Generator compatible             | Ensures clean, uninterrupted power to protected equipment when generator power is used.                                                                           |                   |
| Parallel-redundant capable       | Power the connected equipment with multiple uninterruptible power supplies to increase system redundancy                                                          |                   |
| Dual mains input                 | Increases availability by allowing the UPS to be connected to two separate power sources.                                                                         |                   |
| Sustainability                   |                                                                                                                                                                   |                   |
| EU CoC for UPS                   | Ensures that UPSs sold in the EU are highly efficient                                                                                                             |                   |
| Total Cost of Ownership          |                                                                                                                                                                   |                   |
| Input power factor correction    | Minimizes installation costs by enabling the use of smaller generators and cabling.                                                                               |                   |
| ECO Mode                         | Operating mode that by-passes unused electrical components in good power conditions to achieve high operating efficiency without sacrificing protection           |                   |
| Wide input voltage range         | Designed for harsh electrical environments to save battery life.                                                                                                  |                   |
| Predictive failure notification  | Provides early-warning fault analysis ensuring proactive component replacement.                                                                                   |                   |
| Manageability                    |                                                                                                                                                                   |                   |
| Network manageable               | Provides remote power management of the UPS over the network.                                                                                                     |                   |

LED status indicators

Quickly understand unit and power status with visual indicators.

LCD graphics display

Text and mimic diagrams that display modes of operation, system parameters and alarms.

Multiple distribution options

Superior design flexibility enables a wide range of customer requirements to be addressed.

Integrates with StruxureWare Data Center Expert

An IT-ready, scalable access monitoring system that collects, organizes, and distributes critical alerts, surveillance video and key information, providing a unified view of complex physical infrastructure environments from anywhere on the network
