G-360

Though the G-series is Sea Sonic's base 80 PLUS® Gold efficiency series, it still uses high quality electric components, maintains great 12 volt line regulation at 3 % and – with the newly optimized circuit layout – it achieves an improved hold up time performance above 16 ms. The G-360 model is one of the most cost efficient fully wired power supplies of this family built with high reliability components. The excellent performance of Sea Sonic's S2FC fan control ensures optimal cooling and super low noise making this model an excellent choice for office computers.

80 PLUS® Gold

Seasonic was the forerunner of creating the very first 80 PLUS® Gold certified power supply on the market and since that time it has built a very popular Gold series lineup that covers a full power range of power supplies with impeccable performance and efficiency. The highly efficient 80 PLUS® Gold certification guarantees greater than 87 %, 90 % and 87 % efficiency at 20 %, 50 % and 100 % operating loads, respectively. The clear advantage of buying a power supply with 80 PLUS® Gold rating is the fact that the less energy gets wasted during power conversion, the lower the operating costs will be for the user.

S²FC

The intelligent thermal circuit feature is designed to find the optimal balance between the necessity to cool the components and the need to run the power supply in the most silent manner possible.

Ample +12 V Output

Enhanced +12 V current capability broadens utilization possibilities.

5 Years Warranty

Our commitment to superior Seasonic quality.

Easy-swap Connectors

The markings on the connectors minimize the possibility of mistakes and facilitate installation.

Solid Capacitor

Highly rated capacitors ensure long-term stability and reliability even under extreme conditions.

Specifications are subject to change without prior notice.
