Output stage was floating, pulses didn't return to zero,

★★★★☆ Its unidirectional!

last year by [Member #8527](#) ✓ verified purchaser

It works great except you can't tell if its going CW or CCW because it only has one data output! Useless! I can't even think of a application that doesn't need to know what direction it's going in. SparkFun can you please list this on the site so nobody makes the same mistake as me.

 [CF](#) replied on April 3, 2019:

Sorry about that! We do state that it has a single output in the description though. [COM-10932](#) is the dual output version of this encoder and can tell you what direction it's turning.
