Nice probe. The connector is easy to remove as I didn't need it for my application. All metal construction makes it easy to clear

## ightarrow ightarro

about 4 months ago by Member #32186 //entice purchase/ If you ground the housing and try to read this probe out with the MAX31855K breakout board, you must float your Arduino and everything else otherwise if doesn't work. I have a more expensive probe from another source which is electrically isolated. Still, the price is so low it is good for some applications
