

**K-No.: 26334**
**1000 A Current Sensor for  $\pm 24V$ - Supply Voltage**  
 for electric current measurement:  
 DC, AC, pulsed, mixed ..., with a galvanic isolation between  
 primary circuit (high power) and secondary circuit (electronic circuit)

**Date: 17.02.2016**
**Customer: Standard Type**
**Customer part no.:**
**Page 1 of 6**

**Electrical data**

|           |                                  |           |          |
|-----------|----------------------------------|-----------|----------|
| $I_{PN}$  | Primary nominal r.m.s. current   | 1000      | A        |
| $R_M^{1}$ | Measuring resistance             | 0 ... 100 | $\Omega$ |
| $I_{SN}$  | Secondary nominal r.m.s. current | 200       | mA       |
| $K_N$     | Turns ratio                      | (1): 5000 |          |

<sup>1</sup> connected to sensor output,  $R_M$  for  $I_{P,max}$  see fig. 1 on page 2

**Accuracy – Dynamic performance data**

|                 |                                                               | min.     | typ. | max. | Einheit |
|-----------------|---------------------------------------------------------------|----------|------|------|---------|
| $I_{P,max}^{2}$ | Max. measuring range @ $R_M = 10 \Omega$ ; $T_A = 25^\circ C$ | 2500     | -    | -    | A       |
|                 | @ $R_M = 10 \Omega$ ; $T_A = 85^\circ C$                      | 2150     | -    | -    | A       |
| X               | Accuracy @ $I_{PN}$ , $T_A = -40 \dots +85^\circ C$           | -        | -    | 0.4  | %       |
| $\epsilon_L$    | Linearity                                                     | -        | -    | 0.1  | %       |
| $I_0$           | Offset current @ $I_P=0$ , $T_A = 25^\circ C$                 | -        | -    | 0.1  | mA      |
| $I_{0H}$        | Hysteresis current                                            | -        | -    | 0.1  | mA      |
| $t_r$           | Response time @ 80% of $I_{PN}$                               | -        | < 1  | -    | $\mu s$ |
| $t_{ra}$        | Reaction time @ 10% of $I_{PN}$ ( $di/dt = 1200 A/\mu s$ )    | -        | -    | 1    | $\mu s$ |
| $f_{BW}$        | Frequency bandwidth                                           | DC...100 | -    | -    | kHz     |

<sup>2</sup> currents with high slew rates can be measured above  $I_{P,max}$  (transformer behavior)

**General data**

|               |                                                                | min.        | typ.     | max.       | Einheit    |
|---------------|----------------------------------------------------------------|-------------|----------|------------|------------|
| $\vartheta_A$ | Ambient operating temperature                                  | -40         | -        | +85        | $^\circ C$ |
| $\vartheta_S$ | Ambient storage temperature                                    | -40         | -        | +85        | $^\circ C$ |
| m             | Mass                                                           | -           | 550      | -          | g          |
| $U_C$         | Supply voltage                                                 | $\pm 21.60$ | $\pm 24$ | $\pm 25.2$ | V          |
| $I_{C0}$      | Current consumption for $I_P = 0A$                             | -           | 27       | -          | mA         |
| $I_{CN}$      | Current consumption for $I_{PN} = 1000A$                       | -           | 190      | -          | mA         |
| * $S_{clear}$ | Clearance                                                      | 20          | -        | -          | mm         |
| * $S_{creep}$ | Creepage                                                       | 20          | -        | -          | mm         |
| * $U_{sys}$   | System voltage (determines impulse voltage acc. table 7)       | -           | -        | 1000       | $V_{RMS}$  |
| * $U_{AC}$    | Working voltage (acc. $U_{ACL}$ as limit in table 3)           | -           | -        | 1000       | $V_{RMS}$  |
|               |                                                                | -           | -        | 1500       | $V_{DC}$   |
| * $U_{PD}$    | Rated discharge voltage (acc. table 24 with $U_{PD}=U_{ACP}$ ) | -           | -        | 1414       | $V_{peak}$ |
|               | Max. potential difference acc. to UL 508                       | -           | -        | 1000       | $V_{rms}$  |

\* Constructed and manufactured and tested in accordance with EN 61800-5-1:2007 (Pin 1 - 4 to primary opening)

Reinforced insulation, Insulation material group 1, Pollution degree 2, Overvoltage category III

**Fig. 1:  $I_{P,max} = f(R_M) @ \vartheta_A$** 
**Absolute maximum conditions:**

|                         |                      |                                                |
|-------------------------|----------------------|------------------------------------------------|
| $\vartheta_A$           | $\leq 70\text{ °C}$  | $70\text{ °C} < \vartheta_A \leq 85\text{ °C}$ |
| $I_P = I_{P,max}$ up to | 1800 A <sub>DC</sub> | 1200 A <sub>DC</sub>                           |

Stresses above these conditions may cause permanent damage. Exposure to absolute maximum rating conditions for extended periods will degrade device reliability and lifetime expectancy. Functional operation of the device at these or any other conditions beyond those specified in this specification is not permitted.

**Page 5 of 6**
**Offset ripple reduction**

The offset ripple can be reduced by an external low pass. The simplest solution is a passive low pass filter of 1st order by connecting a capacitor parallel to the burden resistor  $R_M$  as shown on page 3. The required capacitance can be calculated as follows:

$$C_a = \frac{1}{2\pi \cdot R_M \cdot f_g}$$

In this case the response time is enlarged. It is calculated from:

$$t'_r \geq t_r + 2,5R_M C_a$$

**Routine Test<sup>1)</sup>** (Measurement after temperature balance of the samples at room temperature; SC = significant characteristic)

**1000 A Current Sensor for ±24V- Supply Voltage**  
 for electric current measurement:  
 DC, AC, pulsed, mixed ..., with a galvanic isolation between  
 primary circuit (high power) and secondary circuit (electronic circuit)

**Date:** 17.02.2016

**Customer:** Standard Type

**Customer part no.:**
**Page** 6 **of** 6

**Explanation to parameters used in this datasheet**
**Accuracy**
**X<sub>total</sub>(I<sub>PN</sub>):** The sum of all possible errors over the temperature range  
 by measuring a current I<sub>PN</sub>:

$$X_{\text{total}} = 100 \cdot \left| \frac{I_S(I_{PN})}{K_N \cdot I_{PN}} - 1 \right|$$

**X:** Permissible measurement error in the final inspection at RT.  
 I<sub>SB</sub> is the DC output current for a DC primary current with  
 the same value as the (positive) rated current I<sub>PN</sub> (with I<sub>O</sub> = 0)

$$X = 100 \cdot \left| \frac{I_{SB}}{I_{SN}} - 1 \right|$$

**X<sub>TI</sub>:** Temperature drift of the rated value orientated output term.  
 I<sub>SN</sub> (cf. Notes on F<sub>i</sub>) in a specified temperature range:  
 I<sub>SB</sub> is the secondary current at temperature θ<sub>A1</sub> or θ<sub>A2</sub>

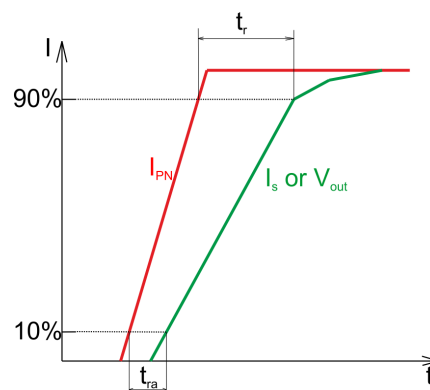

$$X_{TI} = 100 \cdot \left| \frac{I_{SB}(\vartheta_{A2}) - I_{SB}(\vartheta_{A1})}{I_{SN}} \right|$$

**ε<sub>L</sub>:** Linearity fault where I<sub>P</sub> is any input DC and I<sub>Sx</sub> the corresponding  
 output term. (I<sub>O</sub> = 0).

$$\varepsilon_L = 100 \cdot \left| \frac{I_P}{I_{PN}} - \frac{I_{Sx}}{I_{SN}} \right|$$

**Offset and drift**
**I<sub>OH</sub>:** Zero variation after overloading with a DC of tenfold the rated value (R<sub>M</sub> = R<sub>MN</sub>)

**I<sub>OT</sub>:** Long term drift of I<sub>O</sub> after 100 temperature cycles in the range -40 to 85 °C.

**Dynamic properties**
**t<sub>ra</sub>** Reaction time, measured as a delay time between a  
 rectangular primary current (di/dt ≈ 1200A/μs) and the  
 output current I<sub>S</sub> at I<sub>P</sub> = 0.1 \* I<sub>PN</sub>
**t<sub>r</sub>:** Response time, measured as a delay time between a  
 rectangular primary current and the  
 output current I<sub>S</sub> at I<sub>P</sub> = 0.9 \* I<sub>PN</sub>

**Voltage ratings** (according to IEC 61800-5-1:2007)

**U<sub>PD</sub>** Rated discharge voltage (recurring peak voltage separated by the insulation)

**U<sub>sys</sub>** System voltage: RMS value of rated voltage

**U<sub>AC</sub>** Working voltage: RMS voltage which occurs by design in a circuit or across an insulation
