NOTES

- 1. Ripple & noise is measured at 20MHz bandwidth by using a 12" twisted pair-wire terminated with a 0.1µF & 47µF capacitors in parallel.
- 2. Tolerance includes set up tolerance, line regulation, and load regulation.
- 3. Derating may be needed under low input voltages. Please check the derating curve for more details.
- 4. The power supply is considered a component, which will be installed into final equipment. The final equipment must be re-confirmed that it still meets EMC directives.
- 5. In parallel connection only one unit may operate if the total output load is less than 5% of the rated load.
