

RCM14-04 SYSTEM - RESIDUAL CURRENT MONITOR

The RCM14-04 System is a Residual Current Monitor intended for the detection of DC and AC Residual currents in UL2231 EV Charging Systems where such currents may flow under a fault condition.

The RCM14-04 System comprises of a CT with 14mm aperture, and a Sensor PCB intended to be mounted directly onto a printed circuit board by OEMs.

The RCM14-04 System may be used to detect 56mA DC and 20mA AC Residual Currents in DC, single phase or 3 phase installations, and is the equivalent of RCM14-04.

This product is fully compliant with the detection requirements of a CCID20 as defined by UL2231-2.

Supply Conditions

The RCM14-04 System is intended for operation with a supply voltage of 12-24V DC +/-10%. Performance may be compromised if the supply voltage is outside these limits.

Fault Operation & Auto Reset

When a Residual Fault Current that exceeds the rated AC or DC level is detected, the RCM14-04 System Output pin will switch to the "Fault" state within the specified response times. The Output pin will Auto-Reset when the Fault is removed.
